# Group 9000-W16D-DONUT — “Beyond” MEETING MINUTES

## Meeting #6 (Week 6)

| | |
|---|---|
| Date | Friday 23 October 2026 |
| Time | 12:00-13:00 (client new-requirements review) |
| Time Keeper | Xuhui Wang (Hennessy) |
| Attendees | Team: Xuhui Wang (PO); Yinqjia Xie (SM); James Liu (FE); Vaibhav Vaibhav (BE); Xinghao Fu / Senhao (BE); Anoak Du (QA). Client: Kholoud AlQattan (co-clients Dr Basem Suleiman, Dr Gelareh Mohammadi). |
| Apologies | None |
| Please bring/read | Client's newly added requirements list; platform prototype; Dev_Task_List_Client_Requirements.md v1.1. |
| Other resources | Microsoft Teams channel; client requirements screenshot (23 Oct 2026); dev task list v1.1. |
| Meeting purpose | Review the client's newly added requirements (8 items) and confirm the development task dispatch - owners, priorities and dependencies for T-01 to T-20. |
| Next Meeting | Client sync: Friday 30 October 2026 (fortnightly). Next internal lab: Week 7 (Wed 28 Oct 2026). |

## Agenda

| Item | Agenda Item | Assignee | Notes |
|---|---|---|---|
| 1 | Requirement: AI API Key extraction & update doc | Backend (Senhao) + Docs (Anoak) | Move the free API key out of the code into a unified config / environment variable; add .env.example and .gitignore rules; write a how-to-update-the-key document. P0. (T-03, T-13) |
| 2 | Requirement: Login permission - UNSW | Backend (Vaibhav) | Enable the client's UNSW email to use and test the platform; support both exact-email allowlist |

| | | | |
|---|---|---|---|
| | email allowlist | | entries and domain rules (e.g. @ad.unsw.edu.au); add/remove without a code change. P0. (T-01) |
| 3 | Requirement: Interaction logging with precise timestamps | Backend (Vaibhav) | Log every user action on the platform with UTC ISO-8601 millisecond timestamps from a single clock, so the log can be aligned accurately with physiological sensor data. P0. (T-02) |
| 4 | Requirement: Visualisation per experiment + chart types + CSV only | Data Visualization (Anoak) | Generate charts independently per experiment; offer as many chart types as possible for the researcher to choose; CSV is the only export format at this stage. P1. (T-11, T-12) |
| 5 | Requirement: Storage - local temp + configurable path/interface | Backend (Senhao) | Audio/video lands in local temporary storage first; base path and access interface configurable so it can migrate smoothly to a UNSW server later. P1. (T-04) |
| 6 | Requirement: AI assistant input box enlargement | Frontend (James) | Multi-line auto-grow textarea with sensible min/max height and scroll; Enter sends, Shift+Enter adds a newline. P2. (T-05) |
| 7 | Requirement: UI typography & layout (font scale-up, stage list, Stage type) | Frontend (James) | Global font scale-up plus design tokens; remove the up/down arrows in the stage list and keep only the six-dot drag handle so stage text shows in full; align the Stage type label and dropdown font with the overall design. P1. (T-06, T-07, T-08) |
| 8 | Requirement: Recording mandatory gate (new Stage feature) | Frontend (James) + Backend validation | Researcher decides whether to enable it per stage; once enabled, the participant must start BOTH screen recording and camera recording before advancing, otherwise the experiment blocks; backend re-validates to prevent bypass. P1. (T-09) |
| 9 | Task dispatch & priority confirmation | PO (Hennessy) | 20 tasks T-01 to T-20 assigned and confirmed: Vaibhav = T-01, T-02; Xinghao Fu / Senhao = T-03, T-04 plus T-10 (AI Interface); James Liu = T-05 to T-09; Anoak Du = T-11 to T-20 (Data Visualization + Testing & Documentation). Full detail in Dev_Task_List_Client_Requirements.md v1.1. |

## Open Actions

| Item | Action/Discussed | Deadline |
|---|---|---|
| 1 | Implement login permission: UNSW email allowlist and domain rules; add/remove without a code change; verify the client's email works.<br>Owner: Vaibhav (T-01) | P0 - by 31 Oct 2026 |
| 2 | Implement interaction logging: unified event model, UTC ISO-8601 ms timestamps from one clock, exportable by experiment/session.<br>Owner: Vaibhav (T-02) | P0 - by 31 Oct 2026 |
| 3 | Extract the AI API key into unified config / env var; add .env.example; clean any hardcoded key from history.<br>Owner: Xinghao Fu / Senhao (T-03) | P0 - by 31 Oct 2026 |

| | | |
|---|---|---|
| 4 | Implement storage: local temp storage with configurable base path; abstract interface for later UNSW server migration.<br>Owner: Xinghao Fu / Senhao (T-04) | P1 - Sprint 2, by 3 Nov 2026 |
| 5 | Wire the AI assistant interface to the configured key; log every interaction; handle missing-key and timeout gracefully.<br>Owner: Xinghao Fu / Senhao (T-10) | P1 - by 3 Nov 2026 |
| 6 | Build per-experiment visualisation with multiple chart types; CSV-only export.<br>Owner: Anoak Du (T-11, T-12) | P1 - by 3 Nov 2026 |
| 7 | Enlarge the AI assistant input box (auto-grow textarea).<br>Owner: James Liu (T-05) | P2 - Sprint 3, by 17 Nov 2026 |
| 8 | UI work: global font scale-up and design tokens; stage list six-dot drag handle only with full stage text; align Stage type label and dropdown font.<br>Owner: James Liu (T-06, T-07, T-08) | P1 - by 3 Nov 2026 |
| 9 | Add the recording mandatory gate: researcher toggle per stage; block advancing until screen and camera recording are both started; backend re-validation.<br>Owner: James Liu (T-09) | P1 - by 3 Nov 2026 |
| 10 | Write the API-key change/update doc and run the testing suite (permission, timestamp alignment, recording gate, UI regression, storage migration, end-to-end).<br>Owner: Anoak Du (T-13 to T-20) | Aligned per task; end-to-end by 17 Nov 2026 |

# Questions for Mentor

Confirm with the tutor (Lucas Tsitsurai da Silva) that the newly added scope (recording gate, visualisation, login allowlist) remains feasible for Demo B (4 Nov) and the Final Demo (18 Nov), and clarify the Demo B assessment criteria, which are still unreleased.Confirm whether shipping placeholder consent wording is acceptable while ethics approval remains pending.

# Questions for Client

- Q: Which exact UNSW email and domain suffix should be allowed (@ad.unsw.edu.au or @student.unsw.edu.au)? This blocks acceptance of the login permission work.
- Q: What is the concrete list and priority of the chart types you want under 'as many as possible'? This directly affects the visualisation workload.
- Q: Where should local temporary storage live, and what are the capacity limit and the data retention / cleanup rules?
- Q: For the recording mandatory gate, what counts as 'recording started' - must it stay active, and is a dropped stream allowed through?
- Q: Ethical approval status? Still pending confirmation (carried over) - it affects the consent wording and storage go-live.
