Group 9000-W16D-DONUT — “Beyond” MEETING MINUTES

Meeting #3 (Client Kickoff)

Date	Friday 25 September 2026
Time	11:00-13:00 (room booked 10:30-14:30)
Time Keeper	Xuhui Wang (Hennessy)
Attendees	Team: Xuhui Wang (PO); Yinqjia Xie (SM); James Liu (FE); Xinghao Fu / Senhao (BE); Anoak Du (QA). Client: Kholoud AlQattan (co-clients Dr Basem Suleiman, Dr Gelareh Mohammadi).
Apologies	Vaibhav Vaibhav (Backend) - absent (GP appointment); kickoff recording to be shared with him.
Please bring/read	Client mockups & system specification (to be provided); P13 project spec; PC/laptop.
Other resources	Microsoft Teams channel (team added by client); kickoff meeting recording.
Meeting purpose	Client kickoff - confirm platform scope, three user roles, the stage/component/feature model, the critical single-clock time-sync requirement, data export, consent/ethics, OneDrive storage, AI API choice, and Demo A expectations.
Next Meeting	Client sync: Friday 2 October 2026 (then fortnightly). Next internal lab: Week 4, Wed 7 Oct 2026.

Agenda

Item	Agenda Item	Assignee	Notes
1	Platform purpose & value proposition (§1)	Client (presented)	No-code web platform where a researcher builds/runs data-collection experiments; consolidates consent form, survey tool and task tool into one place.

2	Three user roles & priorities (§2)	Client / Team	Researcher (研究者): no-code builder (drag-and-drop, Microsoft Forms-like) - highest priority. Participant (参与者): enters experiment code + participant code, no account, completes stages in order. Administrator (管理员): full dashboard control - LOW priority, defer to the end.
3	Experiments, stages & templates (§3)	Client	Experiment has auto-generated ID/code; researcher may choose full-screen mode per experiment. Stage ≈ page (add/delete/reorder); components & features switchable per stage. Consent/questionnaire/task templates: low priority.
4	Components (§4)	Client	Text, button, textbox, attachment, multiple choice, rating scale (1-5 / 1-10), checkbox (single or multiple), signature.
5	Features per stage (§5)	Client	AI assist embedded (MUST log every interaction w/ timestamp); countdown timer (auto-advance or extend); wall clock; screen recording (optional, per stage); self video/audio ('selfie'); copy-paste logging; navigation control; double-confirm; stop / abort & pause (pause halts timer too).
6	Single-clock time synchronisation - CRITICAL (§6)	Client / Backend	Every event (AI chat, copy-paste, recording, navigation) timestamped to the SECOND in one unified log format, so platform logs can be aligned to external sensor clocks (headband, wristband, eye-tracking). This is the single most important technical requirement of the project.
7	Data export & visualisation (§7)	Client	Primary export = ONE CSV file holding all data (video/audio references, questionnaire, task, AI log, copy-paste). Plus visualisation (charts like Microsoft Forms results).
8	Consent, privacy & ethics (§8)	Client	Consent gate before any capture; student told exactly what is recorded. Under ethical approval (client submitted application, awaiting confirmation). Student may stop / withdraw anytime.
9	Data storage (§9)	Client / PO	Client provides OneDrive (UNSW) storage under ethical approval. Not local / flash memory.
10	AI API (§10)	Client	Team chooses any API (e.g. ChatGPT or similar). No client spec yet; may be refined later.
11	Non-functional requirements (§11)	Client	Researcher builds with drag-and-drop, no code. Crash recovery: resume to the same point after interruption.
12	Submission & testing (§12)	Client	Deliver: platform + source code + usage report + testing scenario. Client WILL provide the exact testing scenario, task, questionnaire and instructions; team copies/pastes them in.
13	Demo A expectation (§13)	Client	Client not yet briefed by course on demo guidelines. Personal expectation: not a complete platform; at least the Researcher part (components + features) working, plus Participant flow for the scenario. Templates + admin = low priority, defer.
14	Client deliverables, next meeting &	Client / PO	Client to provide mockups, system spec, all stage questions & instructions (team already on Teams). Next meeting Fri 2 Oct, then fortnightly. Kickoff

open items (§14-§16)	recording shared with absent Vaibhav.

Open Actions

Item	Action/Discussed	Deadline
1	Build 3 roles (researcher / participant / admin); researcher no-code builder first. Admin low priority. Owner: Team	Sprint 1 (by Demo A 14 Oct 2026)
2	Single-clock sync to the second, unified log format. Blocks O3. Owner: Backend (Senhao)	Sprint 1 (by 13 Oct 2026)
3	Captures for client experiment = AI log + copy-paste log + self-video (no full-screen). Platform supports optional screen recording. Owner: Team	Sprint 1 (by 13 Oct 2026)
4	CSV single-file export + visualisation (§7). Owner: Backend / FE	Sprint 2 (15 Oct - 3 Nov 2026)
5	Consent gate + ethical-approval flow. Pending ethics confirm. Owner: FE / PO	Sprint 1 (pending ethics confirm)
6	Storage via client OneDrive under ethics (§9). Owner: PO / Client	Sprint 1 (after ethics approval)
7	AI API choice: team decides (ChatGPT or any) (§10). Owner: Backend	Sprint 1 Planning (by 13 Oct 2026)
8	Demo A: researcher part + components/features working, plus participant flow. Owner: Team	Demo A - 14 Oct 2026
9	Client to send mockups / spec / questions / instructions. Owner: Client (Kholoud)	Before proposal - 3 Oct 2026
10	Share kickoff recording with Vaibhav (absent). Owner: PO	Week 3 lab - 30 Sep 2026

Questions for Mentor

- Demo A grading criteria / guidelines not yet released by the course - need tutor (Lucas Tsitsurai da Silva) clarification on scope and marking before Sprint 1 Planning.
- Confirm the ethical-approval workflow for storing participant data on the client's OneDrive (UNSW).
- Confirm our scope interpretation (screen recording optional, not the primary modality) aligns with course expectations.

Questions for Client

- Q: Which data captures are required for your own experiment?
- A: AI-interaction log + copy-paste log + self video/audio; full-screen recording is NOT used (kept only as an optional, configurable platform feature for other researchers).

- Q: Priority order of the three roles?

- A: Researcher (no-code builder) first, Participant next, Administrator lowest (defer to end).
- Q: Where is data stored?
- A: Client-provided OneDrive (UNSW) under ethical approval; not local / flash memory.

- Q: Which AI API?
- A: Team's choice (e.g. ChatGPT or similar); no client spec yet.

- Q: What is expected at Demo A?
- A: Not a full platform; at least the Researcher side (components + features) working, plus Participant flow for the scenario; templates & admin low priority.

- Q: Ethical approval status?
- A: Application submitted, awaiting confirmation (fact); affects consent UI copy and storage go-live.
